

1.React app development with AI

App: Dashboard page for flyrank-frontend-capstone

Branch: <https://github.com/haidersara/flyrank-frontend-capstone/tree/dashboard-feature>

Doc:

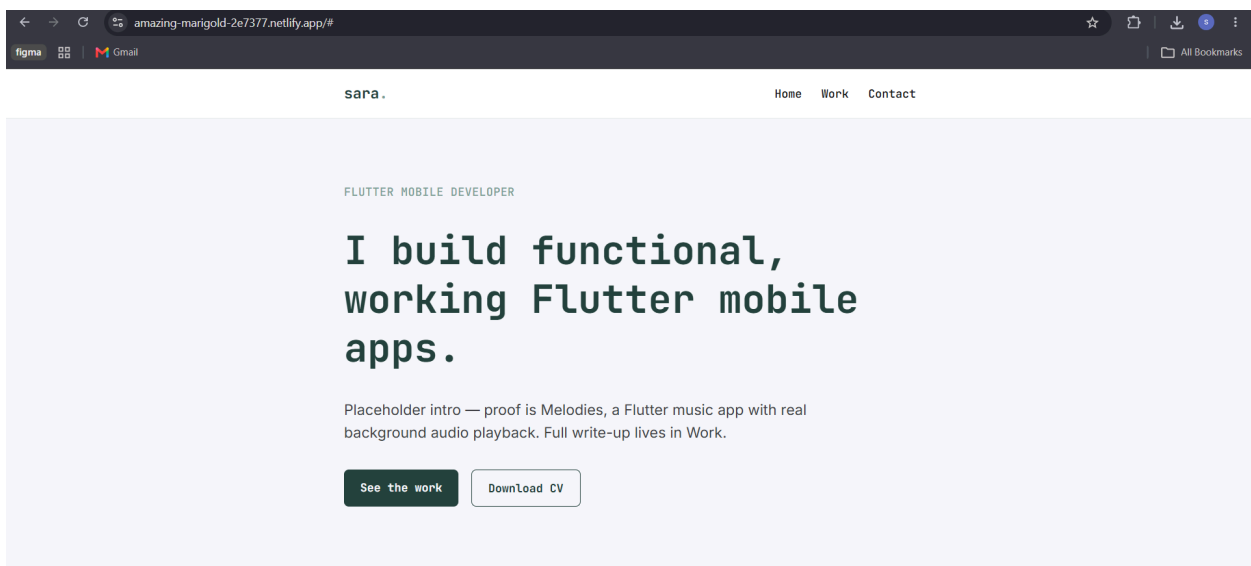

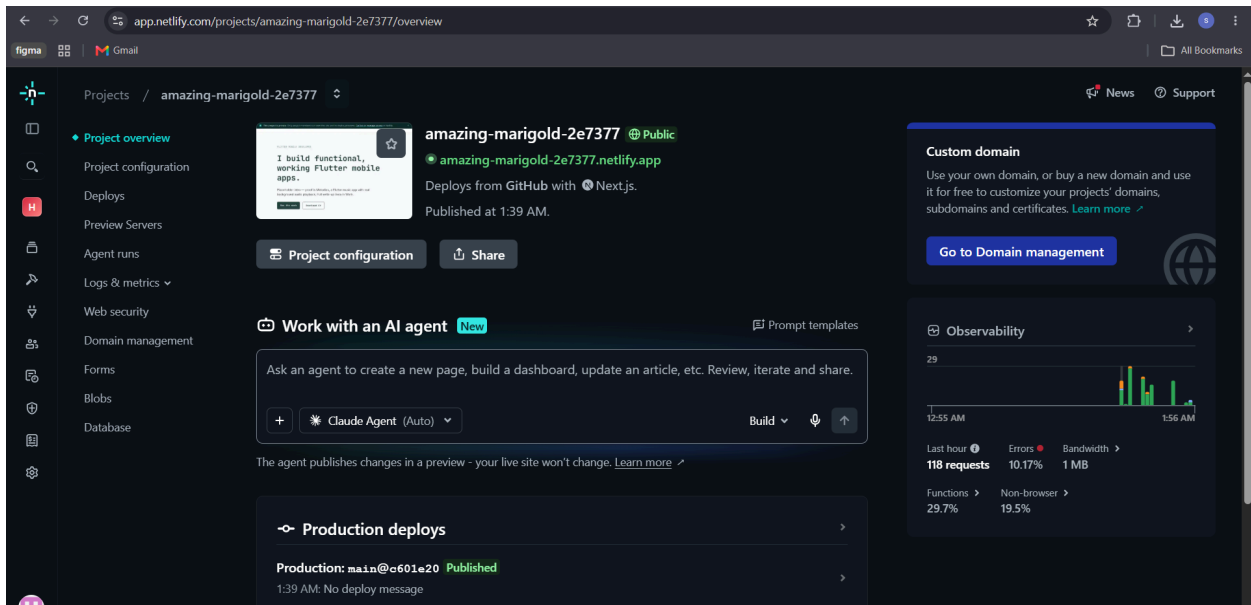

<https://docs.google.com/document/d/1uvsrYv8bg3YQ4PqbjG4jUwBEZuGjBuyyp5vIWvPsBnU/e/dit?usp=sharing>

React app with AI: Built and submitted a dashboard page (sidebar nav, stat cards with trend indicators, activity feed with search/filter) using Cursor as the AI assistant. Documented the prompts, how AI contributed, and three real manual corrections you made (a broken filter bug, mismatched filter labels, a React key anti-pattern).

2. Capstone skeleton, deployed

- <https://amazing-marigold-2e7377.netlify.app/#>
- <https://github.com/haidersara/flyrank-frontend-capstone>

Capstone skeleton, deployed: Live at amazing-marigold-2e7377.netlify.app, deployed via Netlify from your [flyrank-frontend-capstone](https://github.com/haidersara/flyrank-frontend-capstone) GitHub repo. Home page is up with your one-line claim ("I build functional, working Flutter mobile apps"), nav (Home/Work/Contact), and CTAs (See the work / Download CV)

3.Decide Once: Build Your Identity Kit

Set project instructions

Provide Claude with relevant instructions and information for chats within Sara Haider — AI Portfolio Build. This will work alongside your [profile instructions](#) and the selected style in a chat.

I build responsive, practical web applications that combine clean frontend experiences with functional backend systems. My proof comes from hands-on projects including a full-stack e-commerce platform, an AI-powered surveillance system, a Flutter music application, and an ERP solution, as well as freelance web development work. My portfolio should demonstrate this through real projects and clear case studies rather than simply listing skills.

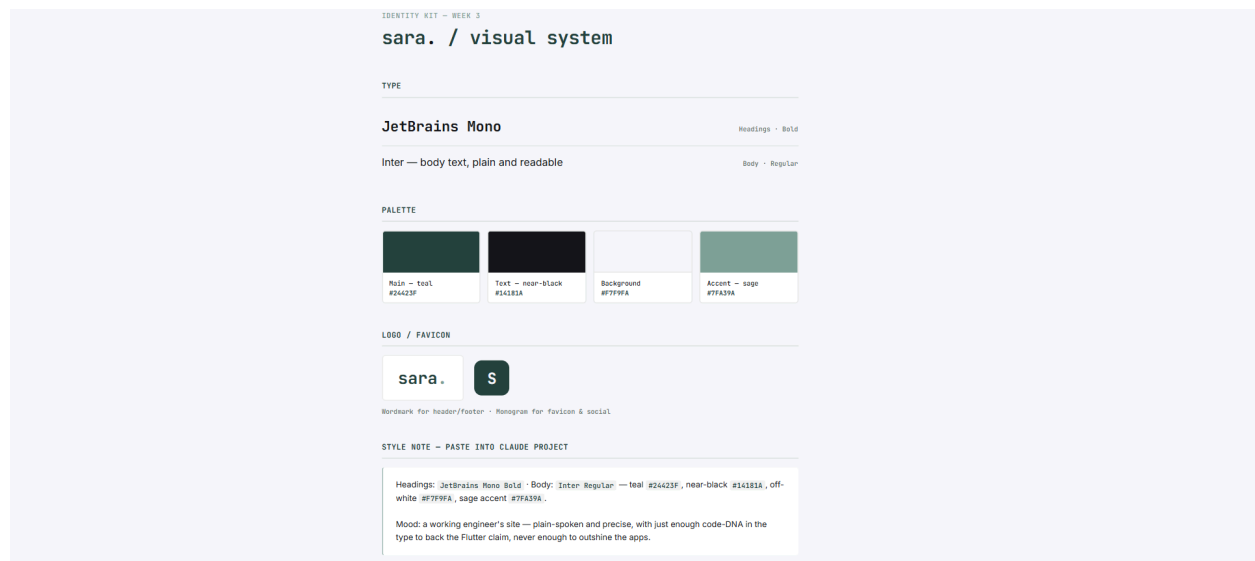

Line 1: Headings: JetBrains Mono Bold · Body: Inter Regular — teal
#24423F, near-black
#14181A, off-white
#F7F9FA, sage accent
#7FA39A.

Line 2: Mood: a working engineer's site — plain-spoken and precise, with just enough code-DNA in the type to back the Flutter claim, never enough to outshine the apps.

Your role:

Cancel

Save instructions

Identity Kit: Locked in a full visual system — JetBrains Mono Bold for headings, Inter Regular for body text; a 4-color palette (teal #24423F, near-black #14181A, off-white #F7F9FA, sage accent #7FA39A); a simple "sara." wordmark plus an "S" monogram for favicon/social; and a two-line style note saved into your Claude Project so future builds stay consistent

4. Kill your darlings: Curate Your Images

https://docs.google.com/document/d/1q7khggTK370fG-un5-gAjRV7BOcNdID4L_v1oJgaxAs/edit?usp=sharing

Final image set, 4 case studies in strongest-first order:

1. **Melodies** (Flutter app) — 3–4 images (splash optional, Search → Album → Home) proving playback persists across navigation. Primary proof for the core claim.
2. **CarryClicks** (e-commerce) — 3 images (listing → detail → order success) showing the checkout flow working end-to-end after your billing validation fix.
3. **PBL Management System** (ERP) — 1 dashboard image, role-based access view as "PBL Manager," honestly framed as in-progress.
4. **Keyf** (WordPress) — 7 images (hero, about, product ×2, process ×2), framed as self-directed practice, not a client project.

Plus: an AI-image rejection note (dropped a soft-wave hero texture, kept a grid pattern for the "code-DNA" aesthetic) and a real-vs-AI log confirming all 13 case-study screenshots are genuine captures.

5. The Through-Line: Map Content & CTAs

<https://docs.google.com/document/d/1TBWWd8LM8oIUWAVKsxmM9RU3M3DCX2yaFsGhLnITcFA/edit?usp=sharing>

One-line claim: "I build functional, working Flutter mobile apps" — proven by Melodies.

Content map (strongest first): Melodies leads → CarryClicks (concrete working flow) → PBL (real depth, framed as in-progress) → Keyf (strongest image count, but not tied to the primary claim).

Open item: a real personal photo for the Home page — not yet sourced.
